

Build robust re-usable links between all your computer systems with the GeobaseMap MapLinker family.

Integrate all your corporate systems

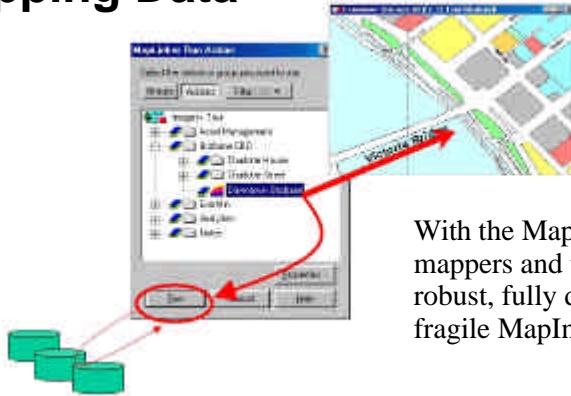

Use common geography or shared database keys to link user interface screens.

- ✓ Integrate "best of breed" applications into a unified processing web
- ✓ Improve productivity with dynamic hot-links
- ✓ Maximize your investment in existing software and training
- ✓ Protect database integrity by integrating at the user interface level rather than duplicating business rules of core product.
- ✓ Minimize code changes to existing applications
- ✓ Embrace legacy applications or swap out components without re-writing interfaces

Off the shelf MapLinker plug-ins communicate directly with applications to deliver smart, context sensitive hot-links.

Document and Organise your Mapping Data

Share your map definitions with MapInfo Professional, Map X and MapXtreme web users.

With the MapLinker Maps and Links database, your MapInfo mappers and the MapInfo tables they contain are maintained as robust, fully documented database items. No more problems with fragile MapInfo work spaces or folder names written into data files.

Hot-Link from Maps to other Maps

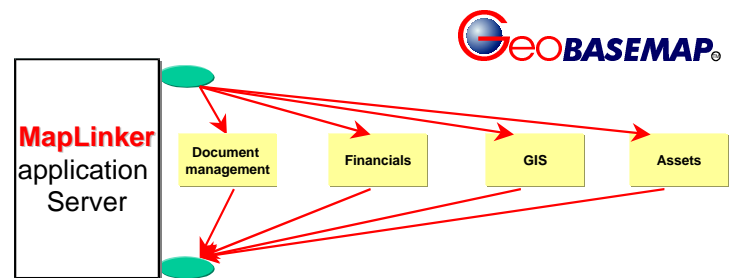

Quickly find your maps and images through graphical drill down.

MapLinker automatically allocated a unique database ID to each map. Simply add that ID to any MapInfo map object to define a dynamic hot-link.

The MapLinker Family

MapLinker is the flexible alternative to old style one to one hard coded interfaces. Application links stored in the MapLinker maps and links database are available to all applications, even those that don't use maps.

MapLinker - Application Hot-Links for MapInfo Professional users.

XLinker - Low cost per seat mapping system with inbuilt application links.

Link Server - You don't need maps to leverage off our pre-defined application links.

WebLinker - Automate map publication with MapLinker catalogs.

Developer Tools - Integrate our application links in your own systems. Add drivers for external applications. Quickly build powerful MapX and MapXtreme applications.
